CARING FOR YOUR GRANITE

Granite is durable and looking after it is quite simple if you mop up any spillages immediately, clean with warm soapy water and dry with a soft white cloth.

To keep your granite in pristine condition:

- Do wipe away spillages immediately
- Be careful with the edges to avoid chipping
- Do not cut directly onto your work surface
- Do not allow water to stand on the worktop, especially over worktop joints
- Do not stand on your worktop as it is resistant to bending and movement
- Do not expose your worktop to excessive heat or moisture
- Do not move your worktop
- Do not use any acid on your worktop
- Do not scrub with abrasive materials
- Do re-seal your granite surface every year

With care granite can last a life time and we want you to enjoy your granite for many years to come.

Rocksolid provides a complimentary care pack with each order which can be used periodically to boost the appearance and protect your worktops. Further care kits can be purchased upon request for £28.00.
