Welcome to your
new Ellis Kitchen

Care Instructions & Guarantee

A warm welcome to your new Ellis Kitchen

Kitchen design has changed dramatically over the last few years, with changing lifestyles and social patterns, the kitchen has become a more social environment as the focal hub of the home, requiring hardworking functionality with comfortable good looks.

We are delighted to inform you your house builder chose top quality units for your kitchen manufactured by Ellis Furniture.

From their state-of-the art purpose built factory in Yorkshire, Ellis have been producing distinctive kitchens for over fifty years, combining design innovation with the highest standard of craftsmanship and attention to detail.

You may be assured therefore that because you will want to use your kitchen day after day for years to come, Ellis kitchens are built to last. Here are a few care instructions to keep your kitchen in pristine condition:-

After Care:

Doors and drawerfronts:

These should be wiped clean with a cloth dampened with soapy water. Avoid over wetting. Do not use any abrasive cleaning agents, acids, bleaches, petroleum based cleaners or solvents. Similarly, do not use scouring pads, wire wool or any similar cleaning aids.

Interior of Units:

Brush out any loose dust etc and clean interior surfaces by means of a cloth dampened with soapy water. Avoid over wetting. Polish surfaces with a soft dry duster. Avoid any harsh or abrasive cleaning materials and excessive water or any other liquid.

Worktops:

Most everyday stains may be removed by wiping with a cloth dampened with soapy water. Certain chemicals and strong dyes can cause damage and discolouration. Spillage of such things as beetroot juice, concentrated fruit juice, red wine, dye, shoe polish, chemicals etc should be wiped off and cleaned immediately. Wipe up all spillages immediately as any liquids left standing on worktops can cause the worktop material to 'blow'. Never chop food or place hot pans or dishes directly on worktops or sinks.

Appliances:

It is the responsibility of the house owner to carefully read the appliance manufacturers instruction booklet and return the guarantee. Please contact the manufacturer direct.

General:

Do not position kettles, toasters, steamers, sterilising units etc under wall units as these items can cause damage to pelmet rails, kitchen doors, and units.

Do not position kettles, steamers, sterilising units etc in close proximity to worktop mitred joints. Any water left standing on worktop mitred joints can penetrate the worktop material and cause damage to the worktop.

Avoid excessive or prolonged wetting.

Wipe up all spillages immediately.

Clean floors with a minimum of water to ensure that the plinth of the units are left dry.

Avoid abrasive cleaners.

Sinks:

Day to day care:

Routine cleaning of your stainless steel sink is easy if the following simple procedure is followed:

After use wipe the bowl and drainer with a soft damp soapy cloth, rinse with clean water. In hard-water areas, an application of Jif will avoid any build-up of dull film of water borne deposits.

Although stainless steel is an extremely durable material and will withstand a great deal of hard use, it can be scratched by hard or sharp objects. If the surfaces are to be kept in a blemish free condition reasonable care should be taken when handling such items.

Discolouration and heavy staining:

Staining of stainless steel in most cases is due to something being deposited on the steel rather than an attack on the material itself. The most common cause of staining is the build up of a thin film of water borne deposits on the sink surface, often first seen as a rainbow effect. The build up of such a film can be avoided by drying the surface of the sink after use as described above. However, should such a film appear, it can be readily removed with a soft damp cloth and Jif. To remove the film, apply the Jif neat and rub vigorously with a damp cloth along the length of the sink surface. After cleaning rinse thoroughly with clean water and dry. Wire wool products and ferrous water supply pipes can leave minute ferrous particles adhered to the sink surface. Since stainless steel under normal conditions **does not rust**, these particles can cause the appearance of small brown rust stains. These stains can be removed using the procedure described above.

Caution: Certain household products contain substances which will attack the stainless steel surface, they are:

1. Bleaches: Most common domestic bleaches contain Chlorine in the form of a hypochlorite. Chlorine attacks the microscopic Chromium Oxide film on the surface and can cause pitting of the surface. Bleaches should always be used in the prescribed strength specified by the manufacturers. Undiluted bleaches can cause pitting and staining of the surface and should be immediately rinsed off with plenty of clean water. All cleaning agents containing hypochlorites are unsuitable for use with stainless steel and, even highly diluted, can cause pitting under certain conditions. For this reason it is strongly recommended that the sink is not used for soaking clothes or cleaning clothes in hypochlorite solutions for long periods.

Adjustments

Fine adjustment to the door opening and closing mechanism may be required from time to time. Such adjustments are simple by following this chart.

Gap Adjustment

Loosen fixing screw (B). Adjust gap with screw (A). Re-tighten screw (B).

Depth Adjustment

Loosen fixing screw (B). Slightly loosen screw (A). Adjust depth and re-tighten screw (B). Check gap and adjust if necessary as above.

Height Adjustment

Loosen screws (C). Adjust height. Re-tighten screws (C).

2. Silver Dip Cleaners: These are particularly harmful since they contain strong acids which can cause discolouration and pitting. The first sign of this is an iridescent rainbow stain, which turns an etched dull grey colour. Should any Silver Dip Cleaner come into contact with the surface of the sink it should be immediately rinsed off with plenty of clean water.

3. Corrosive Foodstuffs: Fruit juices, damp salt, vinegar, readymade mustards, pickle and mayonnaise can cause pitting and corrosion if left in contact with the stainless steel surface for long periods.

4. Acids: Sulphuric, Hydrochloric and other strong acids will cause pitting corrosion, as will photographic developing liquids. All should be immediately washed off with plenty of clean water if contact occurs.

Cleaning: Always use a soft cloth. The use of coarse grit scouring powders or soap filled wire wool cleaning pads is not recommended, since both will mark the surface of the sink. Wire wool pads can leave tiny fragments of wire embedded in the surface and these can rust and leave small brown rust stains. Vigorous rubbing with a soft cloth, Jif, neat detergent, cleaning cream or liquid will remove these stains. Always remove wet cleaning aids (cloths, containers etc) from the sink surface after use in order to avoid the formation of watermarks and rust stains.

ELLIS
Furniture

two year
Guarantee

With careful installation and proper aftercare, your Ellis kitchen will provide years of trouble free service.

If however, within a period of two years a manufacturing defect is reported to us, we shall replace or at our option, repair the part or parts, free of charge. We shall not however be liable for any consequential loss/damage or any further unfitting/refitting costs or financial compensation.

The Ellis 2 year guarantee is limited to components and units manufactured by Ellis Furniture and excludes door fascias, worktops, taps, sinks and appliances which are covered indirectly by each individual manufacturers warranty. In the first instance, contact Ellis Furniture who will direct you to the relevant manufacturer.

Components or units which fail or become defective due to incorrect fitting, abuse or negligence are not covered by the Guarantee.

THIS GUARANTEE DOES NOT AFFECT YOUR STATUTORY RIGHTS

Adding to your Ellis kitchen

If in the future you need to purchase additional matching units, contact the address below for details of your nearest stockist.

Due to the policy of continuous product improvement, Ellis Furniture reserve the right to amend specifications, and as such cannot guarantee future availability of any specific model, colour or design.
